News Release

Bayer statement on jury's decision in phase one of California glyphosate trial

Leverkusen / Whippany, March 19, 2019 – Bayer released the following statement in reaction to a phase one verdict in favor of the plaintiff in the case of Hardeman v Monsanto, a trial conducted in the federal glyphosate multi-district litigation before Judge Vince Chhabria in the Northern District of California. The jury reached a decision in this first phase on causation, but still must decide the question of liability in phase two before there is a final verdict in this case.

We are disappointed with the jury's initial decision, but we continue to believe firmly that the science confirms that glyphosate-based herbicides do not cause cancer. We are confident the evidence in phase two will show that Monsanto's conduct has been appropriate and that the company should not be liable for Mr. Hardeman's cancer. Regardless of the outcome, however, the decision in phase one of this trial has no impact on future cases and trials because each one has its own factual and legal circumstances. We have great sympathy for Mr. Hardeman and his family, but an extensive body of science supports the conclusion that Roundup™ was not the cause of his cancer. Bayer stands behind these products and will vigorously defend them.

Roundup™ products and their active ingredient, glyphosate, have been used safely and successfully for over four decades worldwide and are a valuable tool to help farmers deliver crops to markets and practice sustainable farming by reducing soil tillage, soil erosion and carbon emissions. Regulatory authorities around the world consider glyphosate-based herbicides as safe when used as directed. There is an extensive body of research on glyphosate and glyphosate-based herbicides, including more than 800 rigorous studies submitted to EPA, European and other regulators in connection with the registration process, that confirms that these products are safe when used as directed. Notably, the largest and most recent epidemiologic study – the 2018 independent National Cancer Institute-supported long-term study that followed over 50,000 pesticide

applicators for more than 20 years and was published after the IARC monograph – found no association between glyphosate-based herbicides and cancer. Additionally, EPA’s 2017 post-IARC cancer risk assessment examined more than 100 studies the agency considered relevant and concluded that glyphosate is “not likely to be carcinogenic to humans,” its most favorable rating. As Health Canada noted in a very recent statement, “no pesticide regulatory authority in the world currently considers glyphosate to be a cancer risk to humans at the levels at which humans are currently exposed.”

About Bayer

Bayer is a global enterprise with core competencies in the life science fields of health care and nutrition. Its products and services are designed to benefit people by supporting efforts to overcome the major challenges presented by a growing and aging global population. At the same time, the Group aims to increase its earning power and create value through innovation and growth. Bayer is committed to the principles of sustainable development, and the Bayer brand stands for trust, reliability and quality throughout the world. In fiscal 2018, the Group employed around 117,000 people and had sales of 39.6 billion euros. Capital expenditures amounted to 2.6 billion euros, R&D expenses to 5.2 billion euros.
